

The software that controls  
your logistic flows

### NaviTrans has one goal: make logistic service providers excel !

Every day we provide our customers with effective solutions that help them cut costs, increase profit margins and exceed customers' expectations.

NaviTrans Warehousing is a software solution, 100% designed for logistic service providers that offer warehousing services. It has flexible configuration possibilities to easily adapt to the different flows you need to handle for different customers.

With NaviTrans Warehousing you can:

- ✓ Reduce labour costs of the warehouse workforce.
- ✓ Deliver the quality of service your customer expects.
- ✓ Offer full inventory visibility and track & trace.
- ✓ Deliver no-nonsense Value-Added Logistic services
- ✓ Manage customer relations and interactions from within
- ✓ Adapt to variable customer agreements.
- ✓ Get a complete accounting and finance solution.
- ✓ Maximize your cash resources.
- ✓ Make your own reports and distribute them to stakeholders.
- ✓ Gain insight into your business activities and spot trends.
- ✓ Capitalize on your knowledge and attract new opportunities.
- ✓ Manage the exception with nonconformities
- ✓ Expand into international markets.

*"The transition of multiple systems to NaviTrans has increased the efficiency and quality within the company. In addition, innovative technologies empower high performance for both MIDL employees and customers."*

Werner Meijer, MIDL Logistics, The Netherlands

*"Our aim is to guarantee lead times of 6 hours between order and delivery. This is quite an ambitious goal, one that can be achieved only with a modern WMS system."*

Gert Snel, Snel Logistic Solutions, The Netherlands, Belgium

NaviTrans Warehousing is part of the NaviTrans logistic suite that also contains software for Transport and Forwarding. It is developed on Microsoft Dynamics NAV, the business solution from Microsoft that structures financial and operational business processes.

Like other Microsoft products, NaviTrans is user friendly and easy to implement. It helps you overcome the challenges you face, control your business and stand out from the competition.

**Investing in NaviTrans is investing in your company's future.**

With 20 years of industry focus and 300 logistic service providers that rely on NaviTrans to control their businesses, NaviTrans has become the most comprehensive out-of-the-box solution in the logistic industry. It delivers an abundance of features and functions that enable not only your operational staff but also everyone else in your organization to optimize their daily activities:

- |                                      |                                     |  |
|--------------------------------------|-------------------------------------|--|
| Personalized Screens                 | Picking strategies                  | Invoice assembly & sorting               |
| Multi-language                       | Consolidated picking                | Print invoice to PDF                     |
| Microsoft Office integration         | Wave picking                        | Email invoice                            |
| Drag & drop documents                | Quay planning                       |  |
| Export/import to Excel               | Weigh bridges                       | General Ledger                           |
| Non-conformities                     | Quality control                     | Budgets                                  |
| Notifications                        |                                     | Company groups                           |
| Alert Distribution Manager           | Stock management                    | Consolidation                            |
| Automated e-mailing                  | Cycle counting                      | Dimensions                               |
| Attach PDF                           | Replenishment                       | Multi-currency                           |
|                                      | Party management                    | XBRL                                     |
| CRM integration                      |                                     | Bank reconciliation                      |
| Outlook integration                  | Task management                     | Cost accounting                          |
|                                      | Task time registration              | Intercompany                             |
| Tariffs per customer                 | Employee planning                   | Cash management                          |
| Tariffs for Orders & Tasks           | Employee reporting                  | Bank account management                  |
| Tariffs for Storage Services         | Expected workload                   | Electronic payments                      |
| Tariffs for Periodical Services      |                                     | Direct debits                            |
| Fixed tariffs                        | Automatic services calculation      | Support for SEPA                         |
| Variable tariffs                     | Automatic cost calculation          | Fixed assets                             |
| Tariff maintenance                   | Internal sales of goods             | Deferrals                                |
| Discounts                            |                                     | Accruals                                 |
|                                      | Text based scanner interface (ADCS) | Employee information                     |
| Warehouse layout definition          | Graphical scanner interface         | Wage periods, wages                      |
| Logistic items                       |                                     | Advances                                 |
| Stock keeping units                  | EDI                                 |  |
| Warehouse classification by customer | Web order entry                     | Document reporting                       |
| Product management by customer       | Manual order entry                  | Power BI                                 |
| Warehousing management by customer   |                                     | Excel add-In                             |
|                                      | Pallet Exchange                     | JetReports Essentials                    |
| Inbound order processing             | Package materials                   | KPI dashboard                            |
| Outbound order processing            | Automatic registration              | Microsoft SQL Server Reporting Services  |
| Value-added logistics                | Package balances                    | Open XML integration                     |
| Multi-pallet registration            | Corrections                         | Predefined financial charts              |
| Product transformations              | Invoice Creation                    | Open database connectivity (ODBC) driver |
| Backorders                           | Invoice batch processing            |  |
